Pinkesh Darji

Data Analyst – BI & AI Solutions | SQL · Looker Studio · Excel · Python · AI Tools

Borsad, Gujarat (open to Ahmedabad / Vadodara) · pinkeshd29@gmail.com · +91 98750 34836 · linkedin.com/in/pinkesh29 · github.com/Pinkesh2905

Summary

Data Analyst with 1 year at Vezapp Solutions, working with foundry and manufacturing clients. Writes SQL on client production databases, loads and cleans client data, builds Looker Studio dashboards and sets up shop-floor data-entry apps. Uses AI tools such as Claude Code to build assistants that let clients ask questions about their data in plain English. MCA graduate, Google Data Analytics certified.

Technical Skills

- **SQL:** MySQL on AWS RDS - joins, GROUP BY, subqueries, indexes
- **Dashboards & Reporting:** Looker Studio, Power BI (basic), Excel, Google Sheets
- **Python:** Pandas, NumPy, Matplotlib
- **Tools:** Clappia (no-code apps), Django, Git/GitHub
- **AI Tools:** Claude, Claude Code, ChatGPT, Gemini - for building data tools and automating work

Experience

Data Analyst – BI & AI Solutions | Vezapp Solutions LLP, Vadodara | Dec 2025 - Present

Industrial analytics firm serving foundry and auto-component manufacturers.

- Write SQL queries on foundry clients' MySQL databases (hosted on AWS RDS) to pull moulding, rejection and dispatch data for reports and dashboards.
- Build and maintain Looker Studio dashboards for clients covering plan vs actual, order tracking and quality/rejection.
- Load client data from CSV files into MySQL using Python scripts, checking for duplicates and errors before upload.
- Found why client dashboards were loading slowly: the same queries were running many times at once and key tables had no indexes. Suggested adding indexes and turning on Looker caching.
- Set up shop-floor data-entry apps and workflows in Clappia (no-code), connected to MySQL and Google Sheets.
- Used Claude Code to build AI assistants that let clients ask questions about their MySQL production data and TallyPrime accounts in plain English, instead of opening dashboards. These assistants are now used by several clients.
- Prepared client documentation: Excel field lists for each app, workflow diagrams, meeting minutes and database status reports.
- Screened and interviewed 10+ Data Analyst candidates for the team.

Projects

Vezapp Planner - Production Planning Platform for Foundries (Vezapp) | Django, Next.js, PostgreSQL, Claude API

- A web app that plans a foundry's monthly dispatches against real machine capacity, shifts and holidays. It shows each order's expected dispatch date and which machine is the bottleneck.
- Planners upload the dispatch schedule from Excel. Each order is converted into moulds, cores, metal and machine minutes, using the part's rejection rate and route.
- What-if planning: block a machine, add overtime or change a quantity, and see which orders move before applying the change.
- Reports on dispatch performance, machine utilisation and plan vs actual, with PDF and Excel export, plus an AI assistant that answers questions about the plan.
- Multi-company, with Admin, Planner and Viewer roles; each foundry sees only its own data.

Vezapp AI - Data Chat Website for Clients (Vezapp, in progress)

- A multi-client website where each foundry client logs in with their company ID and asks an AI questions about their own production data, without needing Claude Desktop.
- Each company can only see its own data. The AI turns questions into read-only SQL queries and replies in plain language.

IPL Win Probability Predictor | Python, Pandas, Scikit-learn, Streamlit

- Used ball-by-ball IPL data to predict the chasing team's chance of winning at any point in a match, shown in a simple Streamlit web app.

Business Management System - Home Art Furniture (freelance client, live) | Django, PostgreSQL (Supabase)

- Built an order, inventory, payment and delivery system for a furniture store, now in daily use. Developed with Django using AI coding tools (Claude Code, Antigravity).
- Added sales and payment-mode reports and a daily dashboard. Tested each feature with the store owner before handover.

Elevo - AI Placement Prep Platform (MCA final project) | Django, PostgreSQL, Gemini API | elevo.life

- A live placement-preparation website that generates practice questions with AI (Gemini API).

Education

- **Master of Computer Applications (MCA)** - CMPICA, CHARUSAT University | 2024 - 2026 | CGPA 8.08
- **B.Sc. Computer Applications & IT** - Shri D.N. Institute of Computer Applications, Anand | 2021 - 2024 | CGPA 8.95
- **XII (GSEB)** - 79.57%, 2021 · **X (GSEB)** - 78%, 2019

Certifications

- Google Data Analytics Professional Certificate
